Name: Catherine Stacey

Company: Kyros Digital

Journal Date: 9/9/2024

Journal Period: 8/26/2024 - 9/8/2024

Total Hours Worked this Period: 35.5 hours

<p align="center"><u>Week 1</u></p>

Tuesday 8/27/2024 - 7 hours (10:00 am - 5:00 pm)
Morning:
The majority of my morning consisted of getting on board with the current AI project that the company is working on. My supervisor and coworker helped me get familiar with Git, Yarn, Docker, and Prisma. They also helped me with all the dependencies I need to run the app locally on my computer. I learned a lot of cool stuff but definitely had a lot of imposter syndrome afterward. It was hard to absorb everything, but my coworkers are very smart and patient with me, which is very nice.

Afternoon:
I was assigned my first task with the application. They said they wanted to give me a very basic task and slowly "bring up the heat" as I get more familiar with the application. I learned some interesting stuff about Tailwind classes as my first task was to create a custom 404 page. I started by first Googling how to do it and eventually found out it was very simple. I was able to get a fully working 404 page rather quickly. After that, the rest of my time was spent on making it look nice, researching how to add buttons and links. Very fun.

Thursday 8/29/2024 - 7 hours (10:00 am - 5:00 pm)
Morning:
Today, I asked my coworkers and learned how to properly format and commit my first task to GitHub. I also learned and used a lot of Git commands. There is an issue number assigned to tasks. For readability and organization, you usually want to use that number when writing comments or naming a branch that you are going to commit to because you don't want to commit to the main branch. I then spent time learning more about React from the internet and my coworkers.

Afternoon:
My supervisor is remote today but gave me a task where he wants help setting up the project to leverage Stripe subscriptions. I need to plan out the user experience for signing up and paying a monthly subscription for each user, including:

- Organization information
- Choosing the number of seats
- Adding payment methods
- Enabling the subscription
- Sending out invites to the users who occupy the seats

I spent most of my time researching how to do this.

Friday 8/30/2024 - 3.75 hours (10:00 am - 1:45 pm)
Morning/Afternoon:
Today, I submitted my research plan for the Stripe subscription onboarding process and got revision suggestions from my supervisor. I spent the rest of the time implementing those revisions and continuing to research for a more detailed plan. I also had to submit my 404 page for peer review before it can be submitted to the main branch.

Week 2

Tuesday 9/03/2024 - 7 hours (10:00 am - 5:00 pm)
Morning:
Today, my supervisor was remote, so he was unable to find time to assign an additional task. So I chose to research the Stripe subscription service and also asked coworkers to walk me through where to start to really understand and trace through the code for the whole AI project I am assisting with.

Afternoon:
Just being in an office environment is good for me, I feel. There wasn't much for me to do today, but I continued to research and got to know my work environment and coworkers a little better.

Thursday 9/05/2024 - 7 hours (10:00 am - 5:00 pm)
Morning:
Today, I was assigned to look into the Stripe API and start to get familiar with integrating Stripe into our tech stack. To do this, I honestly asked ChatGPT first and then moved on to Google. I learned a lot, but all the research makes my head spin a little.

Afternoon:
I am now assigned to research and propose some wireframes for the feature set. I'm starting to feel like I might be a little in over my head, but Google and YouTube seem to be a big help for

me right now. And when I need it, my coworkers come around and check to see if I am handling everything well.

Friday 9/06/2024 - 3.75 hours (10:00 am - 1:45 pm)
Morning/Afternoon:
I continued writing up my proposal for the wireframes, and preparing it to show my supervisor. ChatGPT is amazing for spell check and outlining steps to organize my thoughts in the initial part of this proposal.

Simple Initial draft proposal for a landing page:
