Week 5

Tuesday, 9/10/2024 - 7 hours (10:00 am - 5:00 pm)
Morning:

Today, I had some trouble starting my localhost:3000/admin/dashboard/organizations. It was redirecting me to an unloadable page when it was working perfectly a few days ago. I tried solving the problem on my own for a bit before I went to my supervisor who ran a bunch of tests to see if there wasn't a bug in the code. All it seemed to be was a lagging error on my computer. Anyways, afterward I continued to work on some styling errors. I am having a rough time trying to figure out, for the search bar, how to get it to display the organizations in the right spot. Super frustrating because it seems like a simple task, but I've been working on it for a while. :/

Afternoon:

I did it! Now I am trying to figure out how to get the dropdown menu to actually go somewhere and also to make it disappear when you click somewhere else that isn't the search bar. Then I should be done with this task :)

Thursday, 9/12/2024 - 7 hours (10:00 am - 5:00 pm)
Morning:

I got the dropdown menu to disappear when you click away but I am struggling to get the search bar to actually filter the organization list because it's not just a name, there's a bunch of information and functions that should also be displayed on the organization list. I know it seems simple but my comprehension of the entire layout is more or less foggy. I can see the flow but I'm struggling to see where everything is being placed in the code at the moment. If that makes sense. I am taking a moment to walk away from my computer and just go for a very short walk. Just to stretch my legs and clear my head. I have a tendency to over complicate simple tasks

Afternoon:

Still no luck but I am closer. I realized I have to no only change the layout.txs but also the page.tsx and make them talk to each other. Kind of confusing but getting closer for sure.

Friday, 9/13/2024 - 3.75 hours (10:00 am - 1:45 pm)
Morning/Afternoon:

So I figured it out… but now the earlier functionalities of the other buttons on the page don't work. Figured out that problem at the end of my day so I will deal with that next week. :/

Week 6

Tuesday, 9/17/2024 - 7 hours (10:00 am - 5:00 pm)
Morning:

My brain has gone mooooosh. Really trying to figure it out. Going to run to the supervisor in a bit so he can point me in the right direction…

Afternoon:

This is a rough day… new problem: I again keep getting redirected to "page not found", literally driving me crazy. So I can't even really see if my changes are doing anything. My supervisor is pretty busy today so I can't really bother him much. Might have to call it a day, and just step away from my computer for a bit

---

Thursday, 9/19/2024 - 7 hours (10:00 am - 5:00 pm)
Morning:

So… I saw my supervisor to help and :) he had trouble too. Made me feel so much better about the fact that this is taking me forever. Something to do with how react won't pass data from the layout.tsx page to the page.tsx page. So I am now tasked with figuring that out.

Afternoon:

What I have done today to attempt this task is to pass the organization's array from layout.tsx to page.tsx, by leveraging React's context.

I created a TeamsContext.tsx that will allows me to pass the organizations array to any component that consumes it.And in layout.tsx, I wrapped the components with the TeamsProvider.Then in page.tsx, I attempted to consume the teams data using the useTeamsContext hook… I am passing data now, but I just need to utilize it properly for the search bar, basically back to square one :/

Friday, 9/20/2024 - 3.75 hours (10:00 am - 1:45 pm)
Morning/Afternoon:

I have set up, again, a basic dropdown menu but I am trying to get the click to associate with an id number associated with the organization they clicked on. Working on baby steps so i don't over complicate my work.
